

1. Site Navigation (30): Home, Favorite Links, Resume, “Other”, Feedback

- 5 working links throughout the site’s pages; remove each page’s own link to itself (but leave the text)

2. Content & Coding for Old Pages (30): Resume, Fave Links, Feedback, & Response

- Original content for pages, use valid HTML5, styled like rest of site, feedback page's select list updated.

3. New Page Content for the Home Page & the “Other” Page

a) Home page: (25)

- Create a **paragraph introducing you** and your site (several sentences).
- This page should also include an **ordered list of interests or hobbies or activities** you like
- An **unordered list of short personal trivia items** (such as "I'm obsessed with American Idol"),
- Small **picture of yourself or of a role model** of yours or someone you admire...
- Along with a **paragraph about that picture** and why you chose it.
- You can also insert a 2nd image, but these images must be small and not dominate the page

b) “Other” page: (25)

- The page should contain truthful, **original info**, appropriate for this type of personal web site.
- Must have an image, but can't be mostly pics. Each image must be explained with nearby text.
- Page content must take up at least **most of the available 1280x1024 space in browser window**.

4. Create Your own LOGO (25)

- The logo must include the text "Firstname Lastname's World" where you substitute your own actual first and last name, and you may choose to substitute another word (or 2 or 3) for "world"
- The logo can have other artwork, photo(s), background, texture, etc.
- The logo should be placed at the top of all pages in the site’s “header” area, using an `` tag.
- Your logo image and all other images, should contain descriptive "alt text" in the HTML img tags.

5. CSS Styles for Your Site (30)

- Create a **separate “.css” file** and then create a “link” to that file in the "head" section of all pages
- Create a consistent **site wide color scheme** (backgrounds & text colors) that goes with your logo.
- Create appropriate **nav bar link styles** – there should be some changes when the mouse moves over them in browser. Use such selectors as **a:hover** and **a:visited** to do this. Links should be easy to read.
- Create **font-family** settings (using proper list of fonts) so headings are different from main text
- All formatting should be done with CSS styles inside this separate style sheet file
- Validate your CSS styles using some kind of CSS validator like the one at W3C.

6. Testing Your Final Project Site (35)

- Site looks & acts good, fills most of a Chrome window at 1280x1024 using normal image / font sizes
- Proper HTML 5 coding that validates on all pages (no missing closing tags either)
- Proper CSS that validates
- Spell-check the text on your pages

7. Extra credit (max of 15 points – 5 pts each)

1. Nav bar uses image buttons instead of text for links
2. Resume page's info is broken up into 2 columns (headings on left) – using table or CSS
3. Home page's main content organized in 2 columns (see sample screen shot) – using table or CSS
